

# CS540 Introduction to Artificial Intelligence

## Lecture 3

Young Wu

Based on lecture slides by Jerry Zhu and Yingyu Liang

May 24, 2019

# AND Operator Data

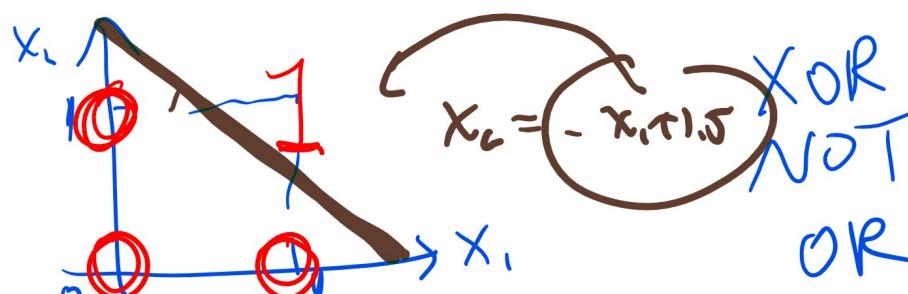

## Quiz (Participation)

- Sample data for AND

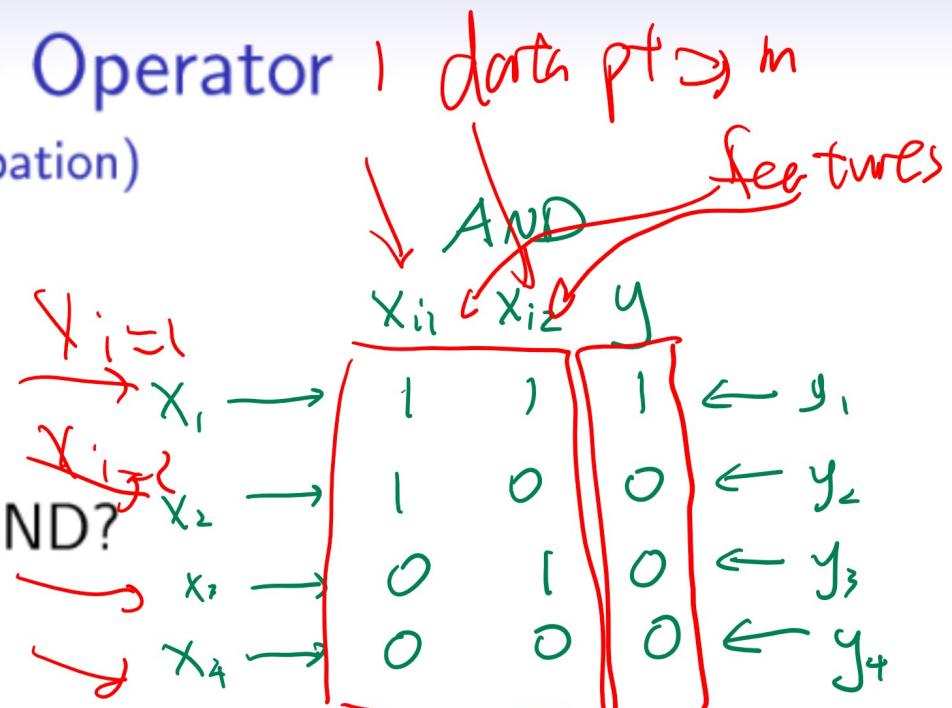

$x_1$	$x_2$	$y$
0	0	0
0	1	0
1	0	0
1	1	1

## Learning AND Operator

## Quiz (Participation)

- Which one of the following is AND?
  - A:  $\hat{y} = \mathbb{1}_{\{1x_1+1x_2-1.5 \geq 0\}}$
  - B:  $\hat{y} = \mathbb{1}_{\{1x_1+1x_2-0.5 \geq 0\}}$
  - C:  $\hat{y} = \mathbb{1}_{\{-1x_1+0.5 \geq 0\}}$
  - D:  $\hat{y} = \mathbb{1}_{\{-1x_1-1x_2+0.5 \geq 0\}}$
  - E: None of the above

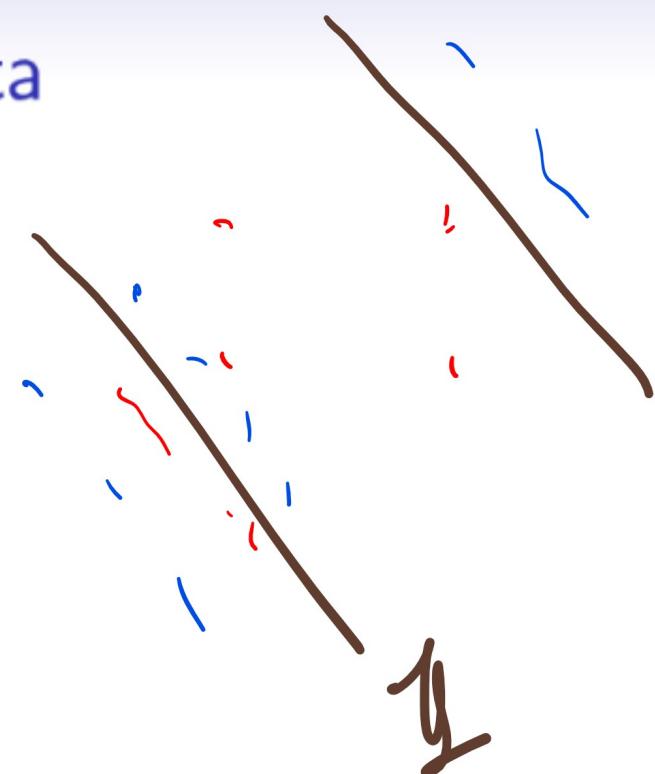

$X_1$	$X_2$	$\hat{Y}$
1	1	1
1	0	<del>-0.5</del> 0
0	1	0
0	0	<del>-0.5</del> 0

# OR Operator Data

Quiz (Graded)

- Sample data for OR

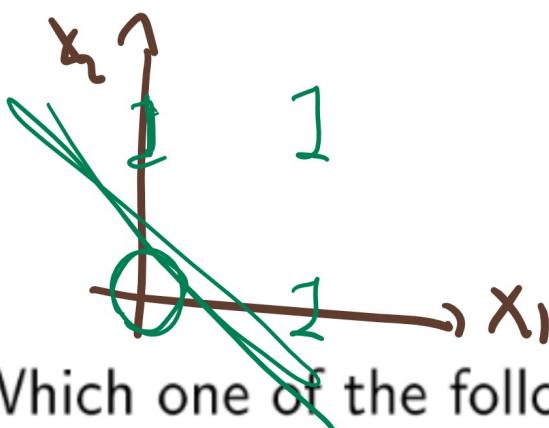

$x_1$	$x_2$	$y$
0	0	0
0	1	1
1	0	1
1	1	1

## Learning OR Operator

## Quiz (Graded)

2

- Which one of the following is OR?
  - A:  $\hat{y} = \mathbb{1}_{\{1x_1+1x_2-1.5 \geq 0\}}$
  - B:  $\hat{y} = \mathbb{1}_{\{1x_1+1x_2-0.5 \geq 0\}}$
  - C:  $\hat{y} = \mathbb{1}_{\{-1x_1+0.5 \geq 0\}}$
  - D:  $\hat{y} = \mathbb{1}_{\{-1x_1-1x_2+0.5 \geq 0\}}$
  - E: None of the above

or

$x_1$	$x_2$	$y$
0	0	0
0	1	1
1	0	1
1	1	1

# XOR Data

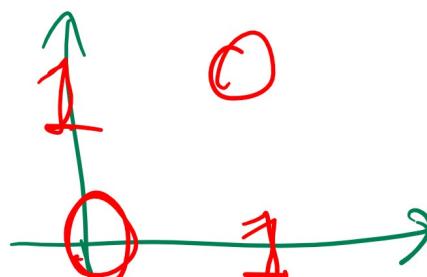

## Quiz (Graded)

- Sample data for XOR

$x_1$	$x_2$	$y$
0	0	0
0	1	1
1	0	1
1	1	0

# Learning XOR Operator

Q 3

Quiz (Graded)

XOR

$x_1$	$x_2$	$y$
0	0	0
1	1	0
0	1	1
1	0	1

- Which one of the following is XOR?

- A:  $\hat{y} = \mathbb{1}_{\{1x_1+1x_2-1.5 \geq 0\}}$
- B:  $\hat{y} = \mathbb{1}_{\{1x_1+1x_2-0.5 \geq 0\}}$
- C:  $\hat{y} = \mathbb{1}_{\{-1x_1+0.5 \geq 0\}}$
- D:  $\hat{y} = \mathbb{1}_{\{-1x_1-1x_2+0.5 \geq 0\}}$
- E: None of the above

"exactly one of  
the two"

# Single Layer Perceptron

## Motivation

- Perceptrons can only learn linear decision boundaries.
- Many problems have non-linear boundaries.
- One solution is to connect perceptrons to form a network.

# Multi Layer Perceptron

## Motivation

- The output of a perceptron can be the input of another.

$$a = g(w^T x + b)$$

$$a' = g(w'^T a + b')$$

$$a'' = g(w''^T a' + b'')$$

$$\hat{y} = \mathbb{1}_{\{a'' > 0\}}$$

# Learning XOR Operator, Part 1

## Motivation

- XOR cannot be modelled by a single perceptron.

$x_1$	$x_2$	$y$
0	0	0
0	1	1
1	0	1
1	1	0

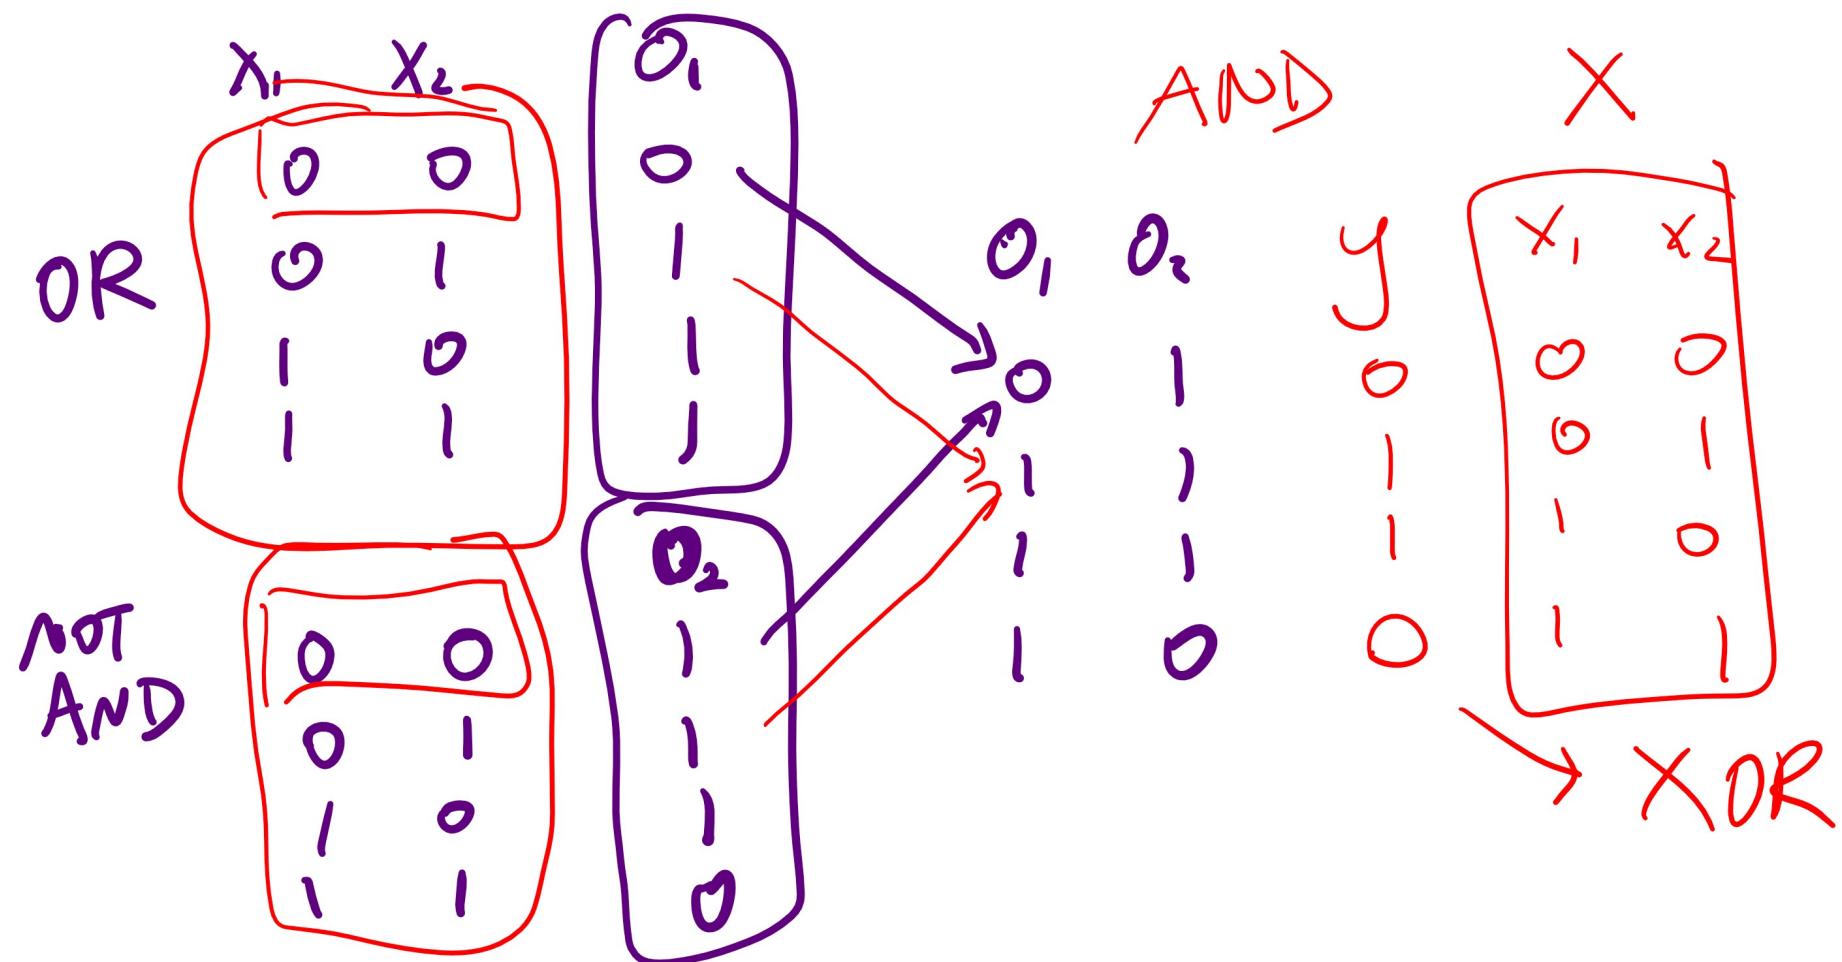

# Learning XOR Operator, Part 2

## Motivation

- OR, AND, NOT AND can be modeled by perceptrons.
- If the outputs of OR and NOT AND is used as inputs for AND, then the output of the network will be XOR.

# XOR Neural Network Diagram

Motivation

# Multi-Layer Neural Network Diagram

## Motivation

# Neural Network Biology

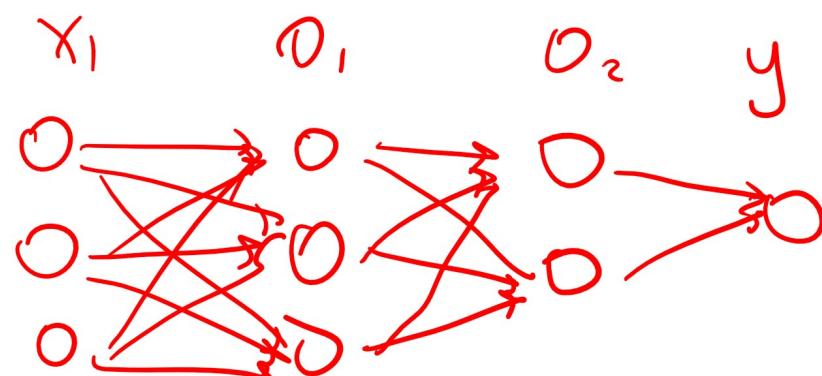

## Motivation

- Human brain: 100, 000, 000, 000 neurons
- Each neuron receives input from 1, 000 others
- An impulse can either increase or decrease the possibility of nerve pulse firing
- If sufficiently strong, a nerve pulse is generated
- The pulse forms the input to other neurons

# Theory of Neural Network

## Motivation

- In theory:
  - ① 1 Hidden-layer with enough hidden units can represent any continuous function of the inputs with arbitrary accuracy
  - ② 2 Hidden-layer can represent discontinuous functions
- In practice:
  - ① AlexNet: 8 layers
  - ② GoogLeNet: 27 layers
  - ③ ResNet: 152 layers

# Gradient Descent

## Motivation

- The derivatives are more difficult to compute.
- The problem is no longer convex. A local minimum is longer guaranteed to be a global minimum.
- Need to use chain rule between layers called backpropagation.

# Backpropagation

## Description

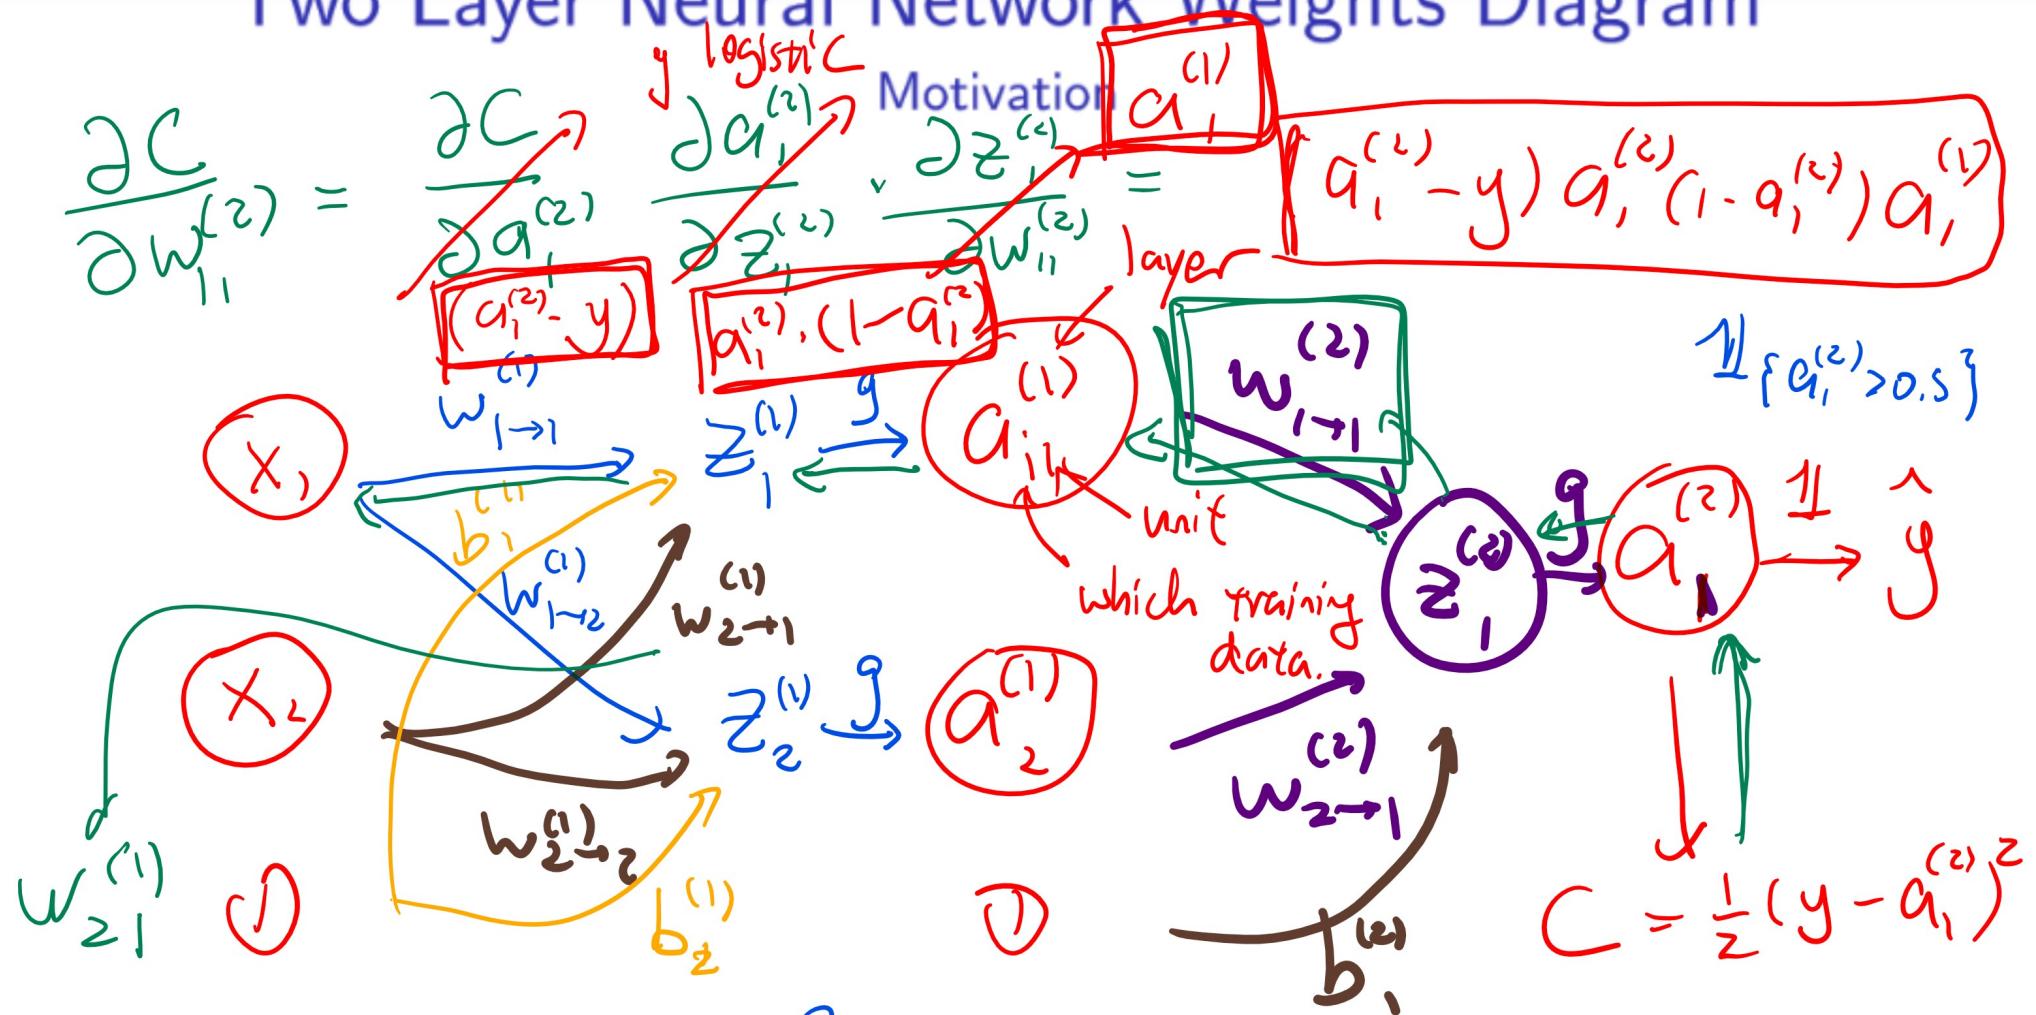

- Initialize random weights.
- (Feedforward Step) Evaluate the activation functions.
- (Backpropagation Step) Compute the gradient of the cost function with respect to each weight and bias using the chain rule.
- Update the weights and biases using gradient descent.
- Repeat until convergent.

$z_i^{(2)}$

$$C = \frac{1}{2} (y - a_1^{(2)})^2$$

$$a_i^{(2)} = g(w_{11}^{(2)} a_1^{(1)} + w_{21}^{(2)} a_2^{(1)} + b^{(2)})$$

## Two Layer Neural Network Weights Diagram

$$\frac{\partial C}{\partial w_{11}^{(1)}} = \frac{\partial C}{\partial a_1^{(2)}} \cdot \frac{\partial a_1^{(2)}}{\partial z_1^{(2)}} \cdot \frac{\partial z_1^{(2)}}{\partial a_1^{(1)}} \cdot \frac{\partial a_1^{(1)}}{\partial z_1^{(1)}} \cdot \frac{\partial z_1^{(1)}}{\partial w_{11}^{(1)}}$$

# Cost Function

## Definition

- For simplicity, assume there are only two layers (one hidden layer), and  $g$  is the sigmoid function for this lecture.

$$g'(z) = g(z)(1 - g(z))$$

- Let the output in the second layer be  $a_i$ ; for instance  $x_i$ , then cost function is same squared error,

$$C = \frac{1}{2} \sum_{i=1}^n (y_i - a_i)^2$$

# Integral Activations

## Definition

- Let the output in the first layer be  $a_{ij}^{(1)}, j = 1, 2, \dots, m^{(1)}$ .

$$a_i = g(z_i)$$

$$z_i = \sum_{j=1}^{m^{(1)}} a_{ij}^{(1)} w_j^{(2)} + b^{(2)}$$

- Let the input in the zeroth layer be  $x_{ij}, j = 1, 2, \dots, m$ .

$$a_{ij}^{(1)} = g(z_{ij}^{(1)})$$

$$z_{ij}^{(1)} = \sum_{j'=1}^m x_{ij'} w_{j'j}^{(1)} + b_j^{(1)}$$

# Required Gradients

## Definition

- The derivatives that are required for the gradient descents are the following.

$$\frac{\partial C}{\partial w_{j'j}^{(1)}}, j = 1, 2, \dots, m^{(1)}, j' = 1, 2, \dots, m$$

$$\frac{\partial C}{\partial b_{j'}^{(1)}}, j' = 1, 2, \dots, m$$

$$\frac{\partial C}{\partial w_j^{(2)}}, j = 1, 2, \dots, m^{(1)}$$

$$\frac{\partial C}{\partial b^{(2)}}$$

# Gradients of Second Layer

## Definition

- Apply chain rule once to get the gradients for the second layer.

$$\frac{\partial C}{\partial w_j^{(2)}} = \sum_{i=1}^n \frac{\partial C}{\partial a_i} \frac{\partial a_i}{\partial z_i} \frac{\partial z_i}{\partial w_j^{(2)}}, j = 1, 2, \dots, m^{(1)}$$

$$\frac{\partial C}{\partial b^{(2)}} = \sum_{i=1}^n \frac{\partial C}{\partial a_i} \frac{\partial a_i}{\partial z_i} \frac{\partial z_i}{\partial b^{(2)}}$$

# Gradients of First Layer

## Definition

- Chain rule twice says,

$$\frac{\partial C}{\partial w_{j'j}^{(1)}} = \sum_{i=1}^n \frac{\partial C}{\partial a_i} \frac{\partial a_i}{\partial z_i} \frac{\partial z_i}{\partial a_{ij}^{(1)}} \frac{\partial a_{ij}^{(1)}}{\partial z_{ij}^{(1)}} \frac{\partial z_{ij}^{(1)}}{\partial w_{j'j}^{(1)}}$$
$$j = 1, 2, \dots, m^{(1)}, j' = 1, 2, \dots, m$$

$$\frac{\partial C}{\partial b_j^{(1)}} = \sum_{i=1}^n \frac{\partial C}{\partial a_i} \frac{\partial a_i}{\partial z_i} \frac{\partial z_i}{\partial a_{ij}^{(1)}} \frac{\partial a_{ij}^{(1)}}{\partial z_{ij}^{(1)}} \frac{\partial z_{ij}^{(1)}}{\partial b_j^{(1)}}$$
$$j = 1, 2, \dots, m^{(1)}$$

# Derivative of Error

## Definition

- Compute the derivative of the error function.

$$C = \frac{1}{2} \sum_{i=1}^n (y_i - a_i)^2$$
$$\Rightarrow \frac{\partial C}{\partial a_i} = \cancel{y_i} - \cancel{a_i}$$
$$a_i - y_i$$

# Derivative of Interal Outputs, Part 1

## Definition

- Compute the derivative of the output in the second layer.

$$a_i = g(z_i)$$

$$\Rightarrow \frac{\partial a_i}{\partial z_i} = g(z_i)(1 - g(z_i)) = a_i(1 - a_i)$$

$$z_i = \sum_{j=1}^{m^{(1)}} a_{ij}^{(1)} w_j^{(2)} + b^{(2)}$$

$$\Rightarrow \frac{\partial z_i}{\partial w_j^{(2)}} = a_{ij}^{(1)}, \frac{\partial z_i}{\partial b^{(2)}} = 1$$

# Derivative of Interal Outputs, Part 2

## Definition

- Compute the derivative of the output in the first layer.

$$a_{ij}^{(1)} = g(z_{ij}^{(1)})$$

$$\Rightarrow \frac{\partial a_{ij}^{(1)}}{\partial z_{ij}^{(1)}} = g(z_{ij}^{(1)}) (1 - g(z_{ij}^{(1)})) = a_{ij}^{(1)} (1 - a_{ij}^{(1)})$$

$$z_{ij}^{(1)} = \sum_{j'=1}^m x'_{ij} w_{j'j}^{(1)} + b_j^{(1)}$$

$$\Rightarrow \frac{\partial z_{ij}^{(1)}}{\partial w_{j'j}^{(1)}} = x_{ij'}, \quad \frac{\partial z_{ij}^{(1)}}{\partial b_j^{(1)}} = 1$$

# Derivative of Interal Outputs, Part 3

## Definition

- Compute the derivative between the outputs.

$$\begin{aligned}z_i &= \sum_{j=1}^{m^{(1)}} a_{ij}^{(1)} w_j^{(2)} + b^{(2)} \\ \Rightarrow \frac{\partial z_i}{\partial a_{ij}^{(1)}} &= w_j^{(2)}\end{aligned}$$

# Gradient Step, Combined

## Definition

- Put everything back into the chain rule formula. (Please check for typos!)

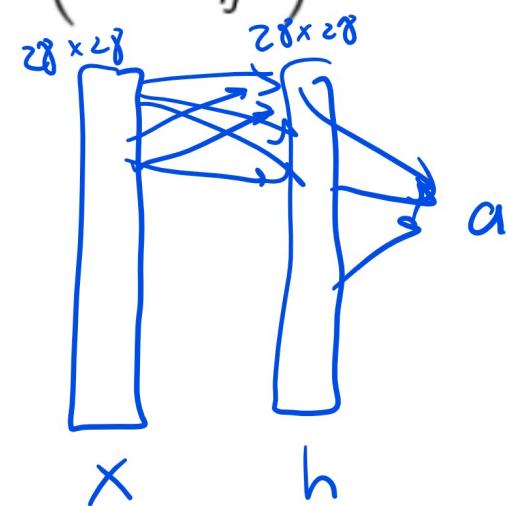

$$\frac{\partial C}{\partial w_{j'j}^{(1)}} = \sum_{i=1}^n (y_i - a_i) a_i (1 - a_i) w_j^{(2)} a_{ij}^{(1)} \left(1 - a_{ij}^{(1)}\right) x_{ij'}$$

$$\frac{\partial C}{\partial b_{j'}^{(1)}} = \sum_{i=1}^n (y_i - a_i) a_i (1 - a_i) w_j^{(2)} a_{ij}^{(1)} \left(1 - a_{ij}^{(1)}\right)$$

$$\frac{\partial C}{\partial w_j^{(2)}} = \sum_{i=1}^n (y_i - a_i) a_i (1 - a_i) a_{ij}^{(1)}$$

$$\frac{\partial C}{\partial b^{(2)}} = \sum_{i=1}^n (y_i - a_i) a_i (1 - a_i)$$

$$a_i - y_i$$

# Gradient Descent Step

## Definition

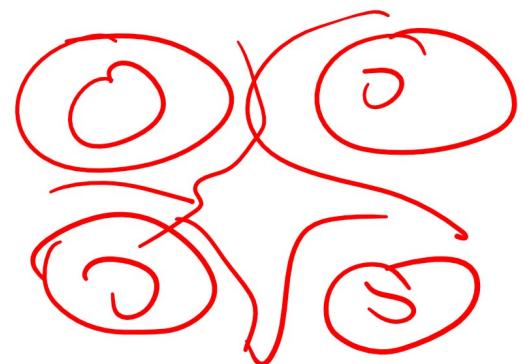

- The gradient descent step is the same as the one for logistic regression.

$$w_j^{(2)} \leftarrow w_j^{(2)} - \alpha \frac{\partial C}{\partial w_j^{(2)}}, j = 1, 2, \dots, m^{(1)}$$

$$b^{(2)} \leftarrow b^{(2)} - \alpha \frac{\partial C}{\partial b^{(2)}},$$

$$w_{j'j}^{(1)} \leftarrow w_{j'j}^{(1)} - \alpha \frac{\partial C}{\partial w_{j'j}^{(1)}}, j' = 1, 2, \dots, m, j = 1, 2, \dots, m^{(1)}$$

$$b_j^{(1)} \leftarrow b_j^{(1)} - \alpha \frac{\partial C}{\partial b_j^{(1)}}, j = 1, 2, \dots, m^{(1)}$$

Q 

# Back Propagation

## Quiz (Graded)

- 2018 May Final Exam Q4
- Which one best describes backpropagation?
- A: Activation values are propagated from input nodes to output nodes.
- B: Activation values are propagated from output nodes to input nodes.
- C: Do not choose this.
- D: Weights are modified based on values propagated from input nodes to output nodes.
- ✓ • E: Weights are modified based on values propagated from output nodes to input nodes.

# Backpropogation, Part 1

## Algorithm

- Inputs: instances:  $\{x_i\}_{i=1}^n$  and  $\{y_i\}_{i=1}^n$ , number of hidden layers  $L$  with units  $m^{(1)}, m^{(2)}, \dots, m^{(L-1)}$ , with  $m^{(0)} = m$ ,  $m^{(L)} = 1$ , and activation function  $g$  is the sigmoid function.
- Outputs: weights and biases:

$$w_{j'j}^{(l)}, b_j^{(l)}, j' = 1, 2, \dots, m^{(l-1)}, j = 1, 2, \dots, m^{(l)}, l = 1, 2, \dots, L$$

- Initialize the weights.

$$w_{j'j}^{(l)}, b_j^{(l)} \sim \text{Unif } [0, 1]$$

# Backpropogation, Part 2

## Algorithm

- Evaluate the activation functions.

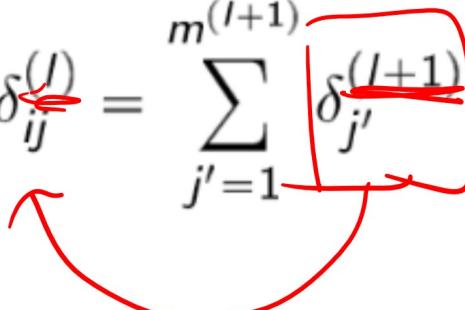

$$a_i = g \left( \sum_{j=1}^{m^{(L-1)}} a_{ij}^{(L-1)} w_j^{(L)} + b^{(L)} \right)$$
$$a_{ij}^{(l)} = g \left( \sum_{j'=1}^{m^{(l-1)}} a_{ij'}^{(l-1)} w_{j'j}^{(l)} + b_j^{(l)} \right), l = 1, 2, \dots, L - 1$$
$$a_{ij}^{(0)} = x_{ij}$$

# Backpropogation, Part 3

## Algorithm

- Compute the  $\delta$  to simplify the expression of the gradient.

$$\delta_i^{(L)} = \frac{a_i - y_i}{y_i - a_i} a_i (1 - a_i)$$

$$\delta_{ij}^{(l)} = \sum_{j'=1}^{m^{(l+1)}} \delta_{j'}^{(l+1)} w_{jj'}^{(l+1)} a_{ij}^{(l)} \left(1 - a_{ij}^{(l)}\right), l = 1, 2, \dots, L-1$$

- Compute the gradient using the chain rule.

$$\frac{\partial C}{\partial w_{j'j}^{(l)}} = \sum_{i=1}^n \delta_{ij}^{(l)} a_{ij'}^{(l-1)}, l = 1, 2, \dots, L$$

$$\frac{\partial C}{\partial b_j^{(l)}} = \sum_{i=1}^n \delta_{ij}^{(l)}, l = 1, 2, \dots, L$$

# Backpropogation, Part 4

## Algorithm

- Update the weights and biases using gradient descent.

For  $l = 1, 2, \dots, L$

$$w_{j'j}^{(l)} \leftarrow w_{j'j}^{(l)} - \alpha \frac{\partial C}{\partial w_{j'j}^{(l)}}, j' = 1, 2, \dots, m^{(l-1)}, j = 1, 2, \dots, m^{(l)}$$

$$b_j^{(l)} \leftarrow b_j^{(l)} - \alpha \frac{\partial C}{\partial b_j^{(l)}}, j = 1, 2, \dots, m^{(l)}$$

- Repeat the process until convergent.

$$|C - C^{\text{prev}}| < \varepsilon$$

# Backpropogation, Multi-Layer, Diagram Discussion

# Training Set Performance

## Quiz (Participation)

- 2018 May Final Exam Q4
- Multi-layer neural network with sigmoid activation can achieve 100 percent correct classification for any set of training examples given sufficiently small learning rate.
- A: Do not choose this.
- B: True.
- C: Do not choose this.
- D: False.
- E: Do not choose this.
